

## MELTING TRUCK

### GENERAL

The melting truck is built on a three axle chassis. The truck has a melting set with two preheaters and a device for filling big bags. A crane, in the middle of the loading area, makes it easy to handle the big bags.

The preheaters are designed to make a fast and careful melting of the material by a special-designed agitator together with the RME-MIX. Instruments and switches are placed in the cab, safely away from traffic.

Hydraulic and electric power as well as the diesel oil is taken from the chassis.

Outlets of the preheaters are at the rear of the truck.

### TECHNICAL SPEC.

Length:	9,5m
Width:	2,55m
Height:	4m
Weight:	25 000kg
Melting set:	2x950L
Crane:	Hiab 032-2L
Burners:	Riello RG2
Temp regulators	CAL 3300
