

MINI

GENERAL

Mini is a machine built on a two axle chassis. There are three different setups; spray, extruder or combined. Mini is equipped with a 2x800L melting set. A diesel compressor helps the pneumatic functions and a pump on the clutch independent power outlet supplies the hydraulic functions. On each side there are gun carriers that can be adjusted both vertically and sideways from the cab. The control box makes the work a lot easier and also makes the line thickness independent of the speed. The cab is equipped so that most of the work can be done inside, safe from traffic. As an option Mini can be built with a special unit for making profiled lines.

TECHNICAL SPEC.

Length:	8m
Width:	2,55m
Height:	3,5m
Weight:	20 000kg
Melting set:	2x800L
Bead tank:	395/450L
Production pump:	120L/min
Compressor:	Demag CS62
Burners:	Riello RG2
Temp regulators	CAL 3300
