

## RME - WET VISIBILITY UNIT

### GENERAL

In order to improve the visibility in wet conditions this unit can be used as an addition to a standard extruder unit. It has 19/11 (50/30cm) outputs that contribute to a profiled line. To adjust the look and characteristics of the profiled line the RME Control Box has new software, which controls all of the outputs. The profiled lines can be made on top of extruded lines at the same time.

### TECHNICAL SPEC.

Length:	12cm
Width:	50/30cm
Height:	30cm
Outputs:	19/11pc
